WILD Connect everything else

cable solutions and systems

Industry Medical Technology Household Appliances

The Customer is always at the very heart of our business

At WILD Connect there is a culmination of many years of experience and a passion for perfection. It is vital for us to fill you with enthusiasm for our performance.

For that reason, since 1972, putting the customer first and to the forefront of how we do business, is a principal element of our Company's culture. In this way we always have an open ear for your wishes; with our proficient Team we can accomplish your requests in the best possible way.

Advantages Procurement Manager:

- » Long term price stability with blanket orders
- » Guarantee of supply and delivery, even when there are spikes in production and without added costs
- » Reduction in costs thanks to a selected and lean supply chain
- » Bespoke IT solutions (Supply On & Customer Portal)
- » Reduction of capital commitment due to security storage

Advantages for the Engineers:

- » Technical Project support and guidance if required, on site
- » Continuous development support from the point of inception of the Project
- » Prototypes for complex various components / cable harnesses within 4 weeks
- » Development and production of soldering tools prototypes
- » Optimisation of various components and cable harnesses from both technical and commercial aspects

Quality - Made in Germany

With more than **45 years experience** in cable manufacture and the production of ready-to-install components WILD Connect has proved itself to be a reliable Partner. An indication of this is proven by our total range of products and a strong customer base from internationally acknowledged leaders in the Industrial, Medical and Household Appliances Sectors.

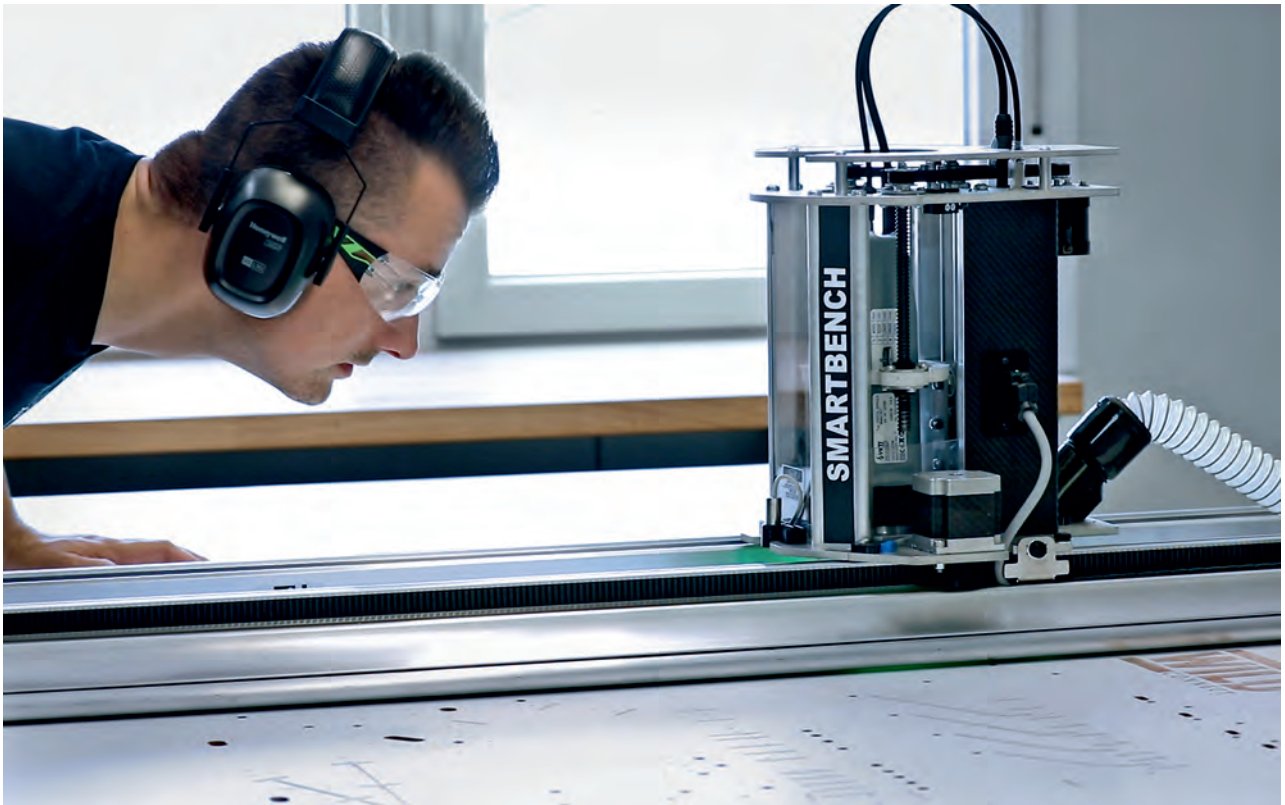

As a traditional Organisation our qualified members of staff support you with knowledge and their heart and soul in order to realise a flexible completion of your Projects.

Commercial Manufacturing over 10000 m²

Our modern machinery alone does not guarantee cost-effectiveness. Many manufacturing processes are still partly semi-automated and occasionally more cost-effective when carried out manually. It is, in fact, these unique production combinations, complemented by our qualified staff which is the key and guarantee to optimising costs.

Our many years of experience allow us to optimally relate customer specific production requirements to our staff and thereafter realisation through our machinery, and so the customer benefits from production within premium conditions.

The perfect complement for this structure is that we operate a multifunctional machine park with **over 50 automats** dispersed **over 10000 m² at two plants in Germany and Hungary**. Among these there are a dozen Komax full automats, fully automatic machines and 30 semi-automatic tools for among other things IDC technologies, two units for resistance welding of wires and cables, two soldering units, as well as numerous other small machines.

Complex Cable Harnesses

For over 50 years, we have been a leading provider of complex cable harnesses, design and development services. Our highly qualified team of industrial engineers designs and develops individual customer devices using the latest technologies, which are developed completely in-house. The process begins with our customers' specifications and drawings, which our specialists efficiently convert into 3D models.

A perfectly coordinated team ensures that the cable harnesses and devices can be optimized both technically and economically. We work hand-in-hand with our customers to deliver rapid, flexible, and cooperative solutions throughout the process.

The development and manufacture of the laying and testing equipment is carried out in accordance with the Poka Yoke principle. This guarantees 100% process reliability and top-quality wire harnesses.

One Stop Service

With an extremely wide range of services on offer you get what you need - safely, reliably and in the highest quality all from one source.

Cable Harness Manufacturing

Following drawings and explicit requirements, our expert staff produce, from pre-manufactured individual parts, complex cable harnesses according to your exact specifications. And it is also possible to integrate cable harnesses into existing systems or connect sets of cables within components. A 100% wiring test during the process ensures both high quality and high commercial viability.

Integrated Circuits

Our multifunctional machine park is perfectly equipped for your demands. From IDC technologies, fully automated wire and cable processing (e.g., Crimp connections); imprinting and identification of the cables and connectors; manual board piecing (incl. soldering); up to the compaction and resistance welding of wires and cables WILD connects.

Assembly of Various Components

With a proficient combination of the best educated staff and a multifunctional machine park, we realise your demands optimally from both technical and qualitative aspects. Thanks to the expert blend of accurate manual work in tandem with our automated production processes, commercial feasibility is ensured from the very outset, from when the first piece is produced.

Soldering Technology

The most modern soldering units at WILD enable utmost precision when measuring the premium solder filler for direct application to the component. The application spectrum comprises the welding of components and the extrusion coating of the cables and connectors and other components. Moreover, central gating is possible for cable anchorage or conductor support assembly. For the production of samples and even the smallest series, our very own developed and produced soldering tool prototypes are employed.

Key Industry Sectors for WILD

Our commitment to high performance, many years of experience and our close proximity to our customers, furnishes us with an excellent understanding of the individual requirements of the most diverse industry sectors.

Medical Technology 100% fault-free

Medical Technology, nationally and internationally, always finds itself permanent conflict, torn between increasing demands and budgetary rigour. Demand takes the course determined by an ever-aging population and with that ever-increasing health costs. Such an environment demands constant innovation and advanced development, in order to maintain the transparency of costs, while simultaneously generating qualified added value for patients and operators alike.

Household Appliances with inner Quality

Household appliances are consumer goods, where the end user values, apart from the functional advantages, above all longevity of the product. The main and basic requirements for a supplier in this branch are the quality, flexibility, and commercial viability. As partner to some of the largest household Brands we make sure that we supply cables harnesses and components which have been 100% tested, thus ensuring perfect functionality for daily use.

Fully automated manufacturing production

We always and consistently have the individual and specific demands of our customers at the forefront of our operations; we ensure that we use the best of state-of-the-art technology and the latest premium testing systems to ensure the safety and compliance of our products.

Industry with People and Machines

Industry embraces all areas of production and extended processing of goods or wares in factories and facilities. Highly contested international markets make for an increasing degree of mechanisation and automatisation. With an exceptional combination of excellent performance, first class educated staff and a multifunctional machine park with over 40 automats, we can realise any demand.

Environment & Safety

At WILD Connect you can trust that as a customer your value chain remains environmentally sensitive and intact when you chose to integrate our products.

For years now we have demonstrated a strong responsible consciousness, verifying that the matters of Environment and Safety take a central role in our Organisational culture.

- » **With our staff** we check and assess regularly environmentally relevant processes and sensitise our staff through training.
- » **With our suppliers** we are in constant dialogue, to minimise disposable packaging and to replace it with environmentally-friendly multi-use packaging in order to reduce waste.
- » **With our customers** we work intensively, to minimise the content of our products with regard to harmful substances, to reduce this to a justifiable and ethical minimum.
- » We pursue open and frank dialogue with the **authorities and the public** with regard to the topic of environmental protection.
- » Through analysis and selection, we achieve a **reduction of suppliers** in order to accomplish effective procurement. This saves time and operating expenses and so naturally also costs.

... and its all certified.
