We put our Customer at the Heart of Our Business

The WILD Connect GmbH has achieved its peak of performance by many years of experience and its passion for perfection. For us it is essential to fulfill your customized demands by our highest level of performance.

Since 1972, our customers are the focus of our effort with strong relationship to them as a principal element of our company culture. Our company goal is to satisfy every customer request from the idea to the finished product - from simplicity to the highest complexity. One key success factor to reach this goal is our talented team of experts, with which we can accomplish your requests in the best possible way.

Advantages Procurement Managers:

- » Long-term price stability on the base of framed contracts
- » Guarantee for supply and delivery, even when there are peaks in production and without additional costs
- » Reduction in costs according to selected and efficient supply chains
- » Customized IT solutions for B2B connectivity (Supply On & Customer Portal)
- » Reduction of capital commitment due to safety stocks

Advantages Engineers:

- » Technical project support and guidance – if required, on site
- » Continuous development from project-start to accomplishment and launch
- » Prototypes for various electric assemblies and wiring harnesses – within 4 weeks
- » Development and production of Hotmelt moulding parts and their prototypes
- » Optimization of various electric assemblies, components and wiring harnesses under technical and commercial aspects

Quality – Made in Germany

With more than **45 years of experience** in cable manufacturing and the production of ready-to-install components WILD Connect has proved to be a reliable partner. Our company is renowned for its extensive range of products in consistent high quality, economically efficient performance and innovative strength. We are proud of our international well-established clientele from the industry, from the medical and household appliances sectors.

As long-standing company, our qualified employees will support you with a wide range of specialized knowledge to realize your projects in the best and most efficient way.

Commercial Manufacturing on over 10.000 m²

Our modern machining facilities and technical equipment alone are not a guarantee for general cost-efficiency. Many manufacturing processes are still semi-automated and even more cost-effective when carried out manually. Our highly qualified employees are the key factor to optimize these production processes to the best possible cost efficiency.

Our long-term experience allows us to realize customers' requirements, even if they are highly specified & complex, adapt them to our processes and provide product to attractive conditions.

We operate with a multifunctional machine park with over **50 automatic machines** at two manufacturing facilities with **over 10.000 m² in Germany and Hungary**. The machine park includes a dozen Komax full automats, multiple other full-automatic machines and 30 semi-automatic tools. Furthermore it includes machinery for processing IDCs, two units for resistance welding of wires and cables, two Hotmelt moulding units, as well as numerous small machines.

Quality at WILD is:
Qualified, friendly and customer-
oriented employees

Everything from One Single Source...

With an extremely wide range of services you get what you need - safe, reliable and in the highest quality - all from one source.

Wiring Harness Manufacturing

Our experienced and technically versed employees produce highly complex wiring harnesses by using prefabricated single parts and processing them on customized assembly boards; all according to your technical drawings and specifications. It is also possible to integrate cable harnesses into existing systems or connect sets of cables within other components. A 100% wiring test during the process ensures both - high quality and high commercial viability.

Electronic Interconnection

Our multifunctional machine park is perfectly equipped for your demands. From IDC technologies, fully automated wire and cable processing (e.g., Crimp connections), imprinting and labeling of cables and connectors, manual assembling of circuit boards (incl. soldering), up to the compaction and resistance welding of wires and cables – WILD connects.

Assembly of Various Components

With an efficient combination of qualified employees and a multifunctional machine park, we realize your demands optimally from both, technical and qualitative aspects. From the first part on our focus is on the cost-effectiveness of production. Due to the perfect interaction between precision manual work and automated production processes the commercial feasibility is always ensured.

Hotmelt Moulding Technology

Our Hotmelt moulding units are on the latest standard and allow us the precise dosing of premium compounds directly at the components. The range of application comprises the sealing of parts, encapsulation of cables and connectors and other products. Furthermore we provide the injection of strain reliefs, assembly and holding devices for small and large batch production. For the creation of samples and small batches we use our specially developed and in-house produced Hotmelt moulding tools.

Our Key Industry Sectors

Our commitment to high performance, many years of experience and our close relationship to our customers gives us a profound understanding of the individual requirements of different industries.

Medical Technology – 100% Correct

The Medical Technology, national and international, always finds itself in a permanent conflict torn between increasing demands and tight budgets. The demand is steadily increasing due to an ageing population and therefore resulting in increasing healthcare expenditures. Such an environment demands constant innovation and advanced development in order to maintain cost transparency and generating added value for patients and operators at the same time.

Household Appliances – with Inner Quality

Household appliances are consumer goods, where the end user values, apart from the functional advantages, the longevity of the product in particular. The basic prerequisites for a supplier in this industry are quality, flexibility and commercial viability. As partner of the largest household brands we ensure the daily functionality by 100% inspection of manufactured parts.

Fully automated Manufacturing Processes

We always have the individual and specific requirements of our customers at the center of our attention and to provide the highest level in manufacturing processes we use state-of-the-art technology and the latest premium testing systems.

Industry – with People & Machines

Industry includes all divisions of production and extended processing of goods or wares in factories and facilities. Global markets reinforce price completion and as a result the mechanization and automation increases. With an exceptional combination of excellent performance, high qualified employees and a multifunctional machine park with over 40 automats, we can realize any demand.

Environment & Safety

At WILD Connect our customers can rely on the value of their supply chain to remain environmental-friendly by integrating our products.

In our company culture environmental protection and workplace safety play a major role because of our high level of responsibility for our employees and our customers.

- » **With our employees** we examine and evaluate environmental relevant processes and raise their awareness through trainings on a regular base.
- » **With our suppliers** we are in constant dialogue to minimize disposable packaging and to replace it with environmental-friendly, reusable packaging in order to reduce waste.
- » **With our customers** we work intensively to minimize pollutants in products and production process to a minimum.
- » **With authorities and the general public** we are on consistent exchange regarding to environmental protection.
- » Through analysis and selection, we achieve a **reduction of suppliers** in order to accomplish effective procurement. Therefor we save time and operating expenses – and of course costs.
